Earthco Projects Supply Australian made PolyCom Stabilising Aid to Victoria, Nsw, ACT and Tasmania as a soil stabilisation alternative that is Environment and Ohs Compliant. This double award winning product has been proven in the marketplace for over 15 yrs and is used by many Shires and councils as well as Civil contractors where low cost, low maintenance sealed and unsealed roads are required. Typical uses are Unsealed roads, Shoulder strengthening, Deep patching, Logging roads, Solar farm roads, Hardstands, Preparation for a sealed road, Sub-grade strengthening, Eliminating cut to waste of many unsuitable materials by modification and or blending to aid usability of clays, sand or materials that are regarded as Unsuitable.

Earthco Projects also supply QPR Premium Cold Asphalt product that is recognised as a long lasting permanent solution to Asphalt repair.

Summary

Earthco Projects is the distributor of PolyCom Stabilising Aid in Victoria, New South Wales and Tasmania.

PolyCom is an award-winning polymer binder used for sealed and unsealed road construction, maintenance and general earthworks, including mining haul road maintenance, transport hardstands and embankment stabilisation.

PolyCom applies innovative technology to strengthen sub-

grade or existing pavements, creating a tight surface which prevents erosion, improves water resistance and reduces maintenance significantly.

PolyCom allows you to recycle roads, avoiding the need to import scarce and costly raw materials.

Simple to use and easy to apply, PolyCom is a modern alternative to traditional road construction techniques, representing significant savings in time, water and money.

Description

Earthco Projects works with local government and civil road contractors to build stronger, longer lasting pavements with PolyCom Stabilising Aid.

PolyCom is used for sub-grade improvement and road

construction (sealed and unsealed pavements) in all sectors including public roads, transport yards, energy infrastructure developments and the mining industry.

PolyCom has a pronounced effect on the behaviour of the

pavement, reducing maintenance requirements by up to six times. PolyCom treated roads last longer, enabling councils and civil road makers to achieve the triple bottom line - financial, social and environmental sustainability.

Sophisticated by design with simplicity of application in mind, PolyCom is easy to use from delivery to application. The product is supplied in 2kg packs, which will stabilise 50m or 100 tonnes of material. The application rate is the same for every material. So if you are stabilising a 1km long road, 5m wide to a depth of 100mm, you only need 10 packs of PolyCom Stabilising Aid.

PolyCom's main advantage is that it works with most pavement materials, allowing you to recycle existing pavements without the need to import scarce and costly raw materials from remote locations. Road construction and maintenance with PolyCom will therefore save time and money on your next project.

Winner of the 2014 Banksia Product Sustainability Award and the Regional Recognition Award at the 2014 Premier's Sustainability Awards, PolyCom complies with all sustainability and OHS requirements.

Associations

- > Municipal Works Operations Association (MWOA)
- > The Institute of Public Works Engineering Australasia (IPWEA)

Products & Services

- > PolyCom Stabilising Aid for sustainable asset management in sealed and unsealed road construction and maintenance.
- > Strengthen and improve workability of pavement materials as well as water-saving and traction improvement. PolyCom can assist contractors and government agencies to save time and improve asset management outcomes, whilst remaining environmentally responsible.
- > Natural resources can be saved when PolyCom stabilising is used to rehabilitate existing roads. Simple, fast and effective, PolyCom is environment and OHS compliant and safe to use.
- > QPR Premium cold asphalt available in bags, pails and 1 ton bulk bags for repairing asphalt, concrete and all manner of potholes, edge breaks and any damaged asphalt.

Industries Served

- > Construction & Engineering
- > Rail
- > Clean Energy
- > Mining
- > Oil, Gas & Energy
- > Water

Major Clients

- > Numerous shires, regional and metropolitan local government departments across Victoria, NSW and Tasmania, as well as state government departments, private developers and contractors.

Other Accreditations

- > PREMIER'S 2013 SUSTAINABILITY AWARDS: Earthco Projects has been selected as a finalist in the Victorian Premier's Sustainability Awards 2013, recognising the sustainable credentials of PolyCom.

Previous Significant Projects

2018

**Numerous Unsealed road projects with Local
govt rehabilitating unsealed roads.
\$3,000,000**

Client: Local Govt and contractors

PolyCom Stabilising Aid was supplied to maintain and strengthen unsealed roads to reduce maintenance requirements. Sealed road patching, Upgrades to shoulders, improving sub grade strength, hard stands, solar farm roadworks and soils stabilisation and remediation. Container yard soil preparation, OHS and Environment compliant Products.
