

Are you a supplier?

////////////////////////////////////

We'd love to hear from you.

Marinus Link is a proposed 1500 megawatt (MW) undersea and underground electricity and telecommunications connector between Tasmania and Victoria.

It will comprise high-voltage direct current (HVDC) cables, fibre optic cables, and converter stations in both Tasmania and Victoria. Marinus Link is currently in the design and approvals phase, with a final investment decision expected in late 2024.

Construction and commissioning will take place in two 750 MW stages from early 2025, with Stage 1 expected to be operational from 2028/29 and Stage 2 from 2030/31.
