

Expression of Interest – Wet Hire Cranes

The proponent must provide a basic break down service and a written back-up plan for the supply of replacement cranes if the supplied crane cannot be returned into service within 2 hours during critical lifts. Gateway South will clearly stipulate when the hire crane is working on critical lifts.

The proponent will supply all relevant service logs and inspection certifications to the Gateway South Plant Inspector prior to the crane entering the project. All servicing of long term cranes on site will be completed during non-work hours and only after Gateway South have approved the proponents Work Method Statement which will include environmental and sustainability best practices.
